DETAILED ACTION

Allowable Subject Matter

1. Claims 16-46 are allowed.

Reasons for Allowance

2. The following is an examiner's statement of reasons for allowance:

Regarding claims 16 and 17, the essential difference from the prior art is determining the density of the slurry as a function of a comparison between the measured buoyant weight of the camera in the slurry and the reference weight of the camera in the air. These features in combination with the other elements of the claim and the base claim are not disclosed or suggested by the prior art of record.

Regarding claim 32, the essential difference from the prior art is determining an amount of a deposit—"debris such as sedimentary deposits located [at] the bottom of the borehole" (Arguments, page 10)—as a function of the measured penetration resistance of the probe. These features in combination with the other elements of the claim and the base claim are not disclosed or suggested by the prior art of record.

Regarding claim 46, the essential difference from the prior art is measuring penetration at a bottom of a borehole with a probe that comprises a graduated bar protruding from the housing and connected to the housing by a spring, and bar being in the viewing area of the camera. These features in combination with the other elements of the claim and the base claim are not disclosed or suggested by the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Citation of Relevant Prior Art

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

a. Head U.S. Patent No. 5,379,216 discloses a system for inspecting a borehole that determines the volume of deposit based on the *electrical* resistance of the deposit (col. 11, lines 54-60).

b. Ciglenec et al., U.S. Patent No. 6,164,126 discloses a probe for measuring penetration on a bottom of a borehole comprising a spring mechanism.

c. Shwe et al., U.S. Patent No. 5,587,525 discloses a system for determining the volume of deposit in a bottom of a borehole.
